

SATURDAY, AUGUST 13, 2016 – 5 AM WEATHER FORECAST

Our approaching front is currently still in Illinois to start this morning, so ahead of the front we may still have to watch out for a pop up this morning, especially around the 8 o'clock hour, then more showers and storms are expected to develop as the morning progresses in Indiana when the front marches more in our direction. Look for winds to be the strongest all week today out of the southwest gusting to around 20 mph at times midday when highs reach the upper 80s and the heat index makes a run through the 90s. The showers and storms developing in Indiana may kick off more showers and storms near us around lunchtime, then look for an increasing threat of precipitation as we get closer to 2 PM and beyond. The activity later today and early tonight should be scattered, then after midnight and into Sunday morning another wave of moisture expected to bring periods of rain that could be heavy at times with embedded storms – this is why the NWS issued a Flash Flood Watch from 2 PM Saturday to 8 PM Sunday. The timing of this wave is still not set in stone, but it appears to be decreasing in intensity once we get into Sunday afternoon. Then later Sunday night and especially into Monday another round of similarly wet weather attempts to slide into Ohio, but once again the details are yet to be determined.
